

## *MobilePass Newsletter #4 February 2017*

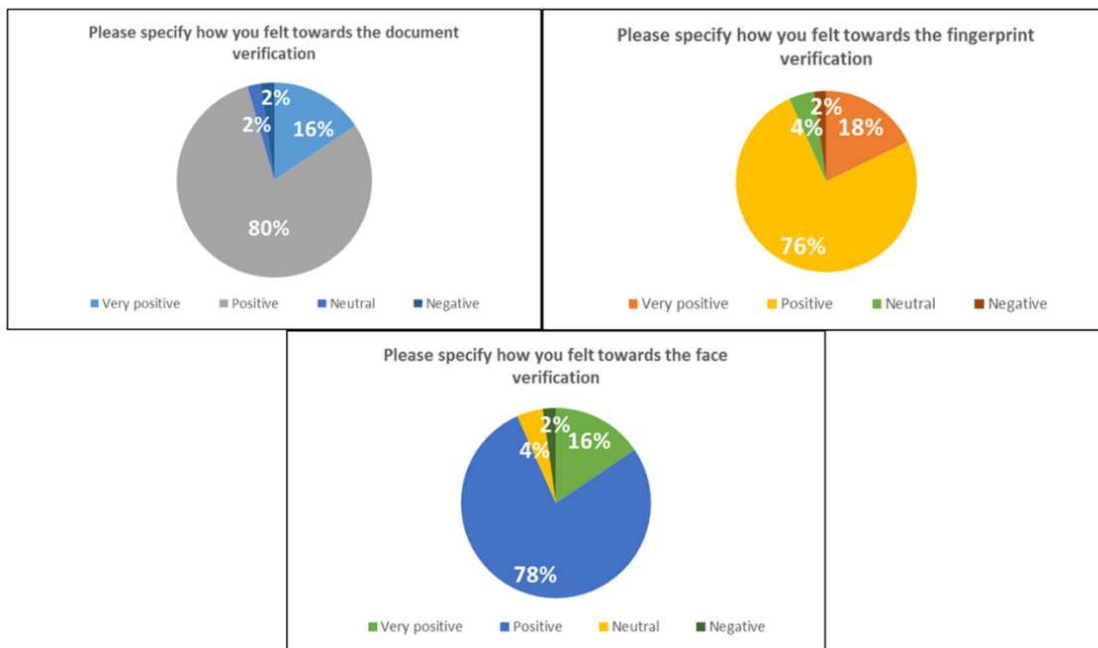

The MobilePass project has officially come to its end on December 31st 2016. It was an amazing 32-months journey, during which the Consortium has managed to develop a new concept for mobile border crossing process and thereby reach its objectives. As a conclusion from our side, we wanted to share with you the last highlights of our project in this newsletter. And if you want to know more about our achievements, let's stay in touch and don't waver to write to [MobilePassCoordinator@ait.ac.at](mailto:MobilePassCoordinator@ait.ac.at)! Thanks for having followed us!

### *MobilePass Demonstration - The successful test of a fully new concept for mobile border crossing process*

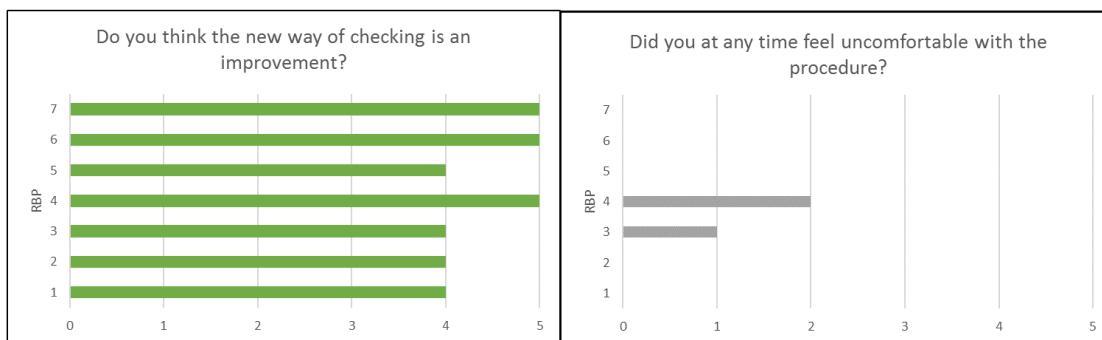

The MobilePass Consortium is happy to report a very successful demonstration at the land border in Sculeni/Romania. For 4 days a team of more than 20 specialists operated an innovative mobile system for a full-page check of electronic passports, biometric facial and contactless fingerprint verification. Statistical feedback from travellers as well as from border guards for this novel and EU regulations compliant procedure is available. You can see below some highlights of these outcomes.

**MobilePass won the Austrian Living Standard Award**

The consortium is especially delighted to announce that the MobilePass project has been awarded by the Austrian Living Standards Award in the category “project”.

This choice has been justified as follows: “The development of standards is one of the main instruments to reach project goals and to include interests and expectations of various stakeholders from the very beginning. This was the reason to award the project MobilePass in the category Project”. The award in category “Project” is given to projects that include different partners in different countries. 4 Consortium members are active in the TC224 WG 18 Working Group to define standards for mobile devices for law enforcement agencies.

For more information, don't waver to visit our [website](#) or check out the video of the device's functionalities [here!](#)
